

# Pinless Meters – Ligno-Scanner Series

Like all other meters from Lignomat, the **Ligno-Scanners** feature calibration accuracy, reliability and convenience. To meet all of our customers needs, we offer six different pinless meters.

Here are some of the advantages for having a pinless meter: You will be able to quickly scan a large number of boards, detect higher moisture levels and water pockets. Indispensable when checking finished products such as cabinet doors, tabletops or ready-to-sell furniture, where pin meters would leave visible marks. Ideal for building inspectors when assessing moisture conditions and water damage in buildings. Can also be used to check excess moisture levels in drywall and concrete.

Many woodworkers, cabinet makers, floor installers and general contractors use pin and pinless meters side by side when inspecting lumber, checking finished products or laying and inspecting hardwood floors. Lignomat offers a special discount when buying both meters. Also consider the new Ligno-DuoTec, a combination of pin and pinless meter (page 3) and the Professional Packages for floor installers and contractors (page 10).

**We recommend buying a pin meter first for its greater versatility and accuracy, but as a second meter we recommend the pinless Ligno-Scanner.**

**THE ENTIRE MEASURING PAD HAS TO BE ON THE WORK PIECE FOR ACCURATE READINGS.**

	DEPTH	CORRECTIONS FOR SPECIES	SIZE OF MEASURING PAD	SPECIFICATIONS FOR ALL SCANNERS
Ligno-Scanner S	1/4"	8 Settings	1 5/8" x 2 5/8"	Measuring Range: 5-99%, dependent upon Species Resolution of Read-out: 0.1% All Scanners include Carry Pouch with Belt Loop.
